1. Applicant's election with traverse of Group I, claims 1-5 in Paper No. 6 is acknowledged. The traversal is on the ground(s) that there is not serious burden on behalf of the office. This is not found persuasive because the claims are directed toward distinct inventions which have acquired a separate status in the art as well as the fact that the issues that arise in examining, apparatus and method claims are different and this would constitute a burden on the Patent Office.

2. Claims 1-15 remain in the application with claims 6-15 being drawn to a non-elected invention as noted above. Hence, claims 1-5 are the only remaining active claims in the case.

Drawings

3. Figures 11-15 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1762

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Minowa et al. (5,622,585).

Minowa et al. (5,622,585) depicts an alignment holder (25) where parts to be coated (1,3) are placed and held together by adhesive strip (23a). The combination is pressed to a coating material (30) to coat one end and then the coated end is attached by a second adhesive strip (23b) and the first adhesive strip (23a) is removed. The second end is coated while the combination is held by adhesive strip (23b) (col. 5, line 15 – col. 5, line 40). A capacitor is formed with the terminal ends being coated (Fig. 10).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nitta et al. (4,664,943) in combination with JP 11-334785A or Minowa et al. (5,622,585).

Art Unit: 1762

Nitta et al. (4,664,943) teaches a method of coating external electrodes for chip parts. The apparatus includes a aligning means to align the chip parts to be coated by contacting the terminal ends to the coating material and reversing the chip to thereby coat the other terminal side.

Nitta et al. (4,664,943) fails to teach using an adhesive coating to hold the chip part for coating the terminal ends.

JP 11-334785A and Minowa et al. (5,622,585) teach an adhesive tape atop a base material for carrying and mounting electronic parts.

Therefore, it would have been obvious for one skilled in the art at the time the invention was made to have substituted one holding mechanism for another, an adhesive tape as evidenced by JP 11-334785A or Minowa et al. (5,622,585) for the holding plates of Nitta et al. (4,664,943), for holding the chip parts during coating the terminal ends with the expectation of achieving similar results.
